### CMS (Content Management Systems)

The advantages a CMS can provide for a company website can be huge. A CMS can allow full control over the website using a familiar word processing tool. There's no need to have to wait for your designer to update the site. Simply login, enter the new text or image and press save! There is an impressive list of features a site like this can provide:

- Professional website design for a unique web presence.
- Online Hosting 24/7
- 20 email addresses.
- Automatic PDF creation on all pages.
- Fully customisable news area with RSS feeds, atom feeds, digg links etc.
- Client/customer registration area. Fully customisable to your specifications.
- Mass mailing tools allows you to reach all your contacts and registered users with beautiful HTML emails, again editable through a simple word processor.
- Fully editable contact page.
- Create your own online polls.
- Built in analytics giving you detailed statistics and trends of user's behavior and online traffic analysis coming to your site.
- WCAGA accessibility, guaranteed.
- Prices vary depending on the scale of the web site. Please contact me for a full quote.

### SEO (Search Engine Optimisation)

As most people with websites know there isn't much point in having a great site if no one can find it. Fine tuning websites to increase exposure to search engines like Google and Yahoo can be a a complicated task with many areas that need to be considered. I have a strong track record of success in this area and am capable of getting your site visible to your target audience.
